(AALO7544-AAL26789) and methods of assessing whether a patient is affilicted with breast cancer by examining the correlation between the expression of certain markers and the cancerous state of breast cells. The polynocleotides and encoded polypeptides are potential markers for detecting, diagnosing, monitoring, characterising treating and potentially preventing breast cancer. The polynocleotides and encoded polypeptides are also useful for isolating compounds with cytostatic
                                                                                                                                                                                                                                                                                                                                                                                                                                            atgaccatgattcgagttgtgtcccataccagcgttcctcttttgctaaaaaaccctgat 588

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to the isolation of novel human enzyme polypeptides (AAU23915-AAU33814), and the CDNA and genomic sequences encoding them. The enzyme polypeptides of the invention may comprise the functional classes of oxidoreductases, transferases, hydrolases, lyases, isomerases or liqases. The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of a wide range of immunodeficiency disorders (e.g. AIDS) autoimmune disorders (e.g. arthritis), neurological disorders (e.g. AILAbelmer's disorders (e.g. arthritis), neurological disorders (e.g. AILAbelmer's disorders (e.g. arthritis), neurological disorders (e.g. atherosalerosis), netaled disorders (e.g. atherosalerosis), netaled disorders (e.g. atherosalerosis), no infertility) and infectious disorders (e.g. atherosalerosis), blood-related disorders (e.g. infertility) and infectious disorders (e.g. atherosalerosis), and infectious disorders (e.g. infertility) and infertious physicales of the invention can also be used in gene therapy.

ANS40785-ANS41684 represent cDNA sequences encoding for the novel human or sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO

AAC7446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORRX open reading frames 1 to 3161. The ORFX acquences have activities such as: cytostatic; hepatotropic; vulnerary; antiparkinsonian; nootropic; neuroprotective; immunosuppressant; immunosuppressant; immunosuppressant; immunosuppressant; immunosuppressant; antidabetic; hypotensive; dermatological; antibapersorye; antidabeterial; antiviral; antifungal; antithenmatory; antibacterial; antiviral; antifungal; antithenmatory; antidabetic; presence of or predisposition to, or preventing or treating the presence of or predisposition to, or preventing or treating pathological conditions associated with an ORFX-associated disorder. The nucleic acids can be used to express ORFX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative disorders, osteoarthritis, graft vs host disease, cardiovascular disease, diabetes mellitus, parternsion, hypothyroidism, cholesterol ester storage, systemic lupus crytematosus, severe combined immunodeficiency (SCID), AIDS, vital, bacterial or fungal infection, malaria, autoimmune disorders, asthma, alleria, antidifalmmatory disease; to enhance complaintia, antilitialmmatory disease; to enhance complaintia, antilibit thrombosis; and as a contraceptive.

The present sequence is human drug metabolising enzyme (DME-17) CDNA.

Human DME and its nucleic acid molecule are useful for the diagnosis,
treatment and prevention of disorders associated with increased or
decreased expression of DME. Examples of such disorders include,
autoimmune/inflammatory disorder such as acquired immune deficiency
syndrome (AIDS), rheumatoid arthritis, osteoporosis; cell proliferative
disorder such as epilepsy, anaemia; endocrine disorder such as
acromegaly, cretinism, thyrotoxicosis; pancreatic disorder such as
acromegaly, cretinism, thyrotoxicosis; pancreatic disorder such as
acromegaly, cretinism, dysphagia and hepatic tumours including
metabolic disorder such as Addison's disease, obesity; gastrointestinal
disorder such as anorexia, dysphagia and hepatic tumours including
nodular hyperplasia, adenomas and carcinomas. DME DNA is useful for
creating 'knockin' humanised animals (pigs) or transgenic animals (mice
or rats) to model human disease. DME DNA is also in useful is gene
therapy. DME and its immunogenic fragments are useful for screening
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         463

primers passible and person the present DNA molecules encoding and PCR primers for PRO polypeptides of the invention. The sequences of the invention can be used to detect the presence of a tumour in a mammal by comparing the level of expression of a PRO polypeptide in a test sample of comparing the level of expression of a PRO polypeptide in a test sample of cormal cells from the animal and a control sample of normal cells, whereby a higher level of expression in the test sample of normal cells, whereby a tumour in the mammals include dogs, cats, cattle, horses, sheep, pigs, goats and rabbits but are preferably human. The polypeptides can be used to stimulate tumour necrosis factor (TNF) alpha release from human blood, when contacted with it. A specific polypeptide can be used to stimulate the proliferation of differentiation of chordrocyte cells. The PRO proteins can be used to determine the presence of tumours and also susceptibility to tumour development, particularly adrenal, ung, colon, breast, prostate, rectal, cervical, or liver tumours; in mammalian subjects. The oligonucleotide probes specific for the PRO nucleic acids can be used for genetic analysis of individuals with genetic disorders.
                                                                                                                                                                                                                                                                                                                                                  Novel nucleic acids encoding PRO polypeptides, used to diagnose the presence of tumours, such as prostate and breast tumours, in mammals and to screen for modulators of the compounds .

                                                                                                                                                                                                                                                                          Sequence 9, Application US/07757342D
Patent No. 6218509
GENERAL INPORMATION:
MINEGISHI, MASAO
MINEGISHI, Takashi
NAKAMURA, Kazuto
TITLE OF INVENTION: PROTEIN, DNA AND USE THEREOF
NUMBER OF SEQUENCES: 10
CORRESPONDENCE ADDRESS:
ADDRESSEE: DAVID G. CONLIN; DIKE, BRONSTEIN, ROBERTS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                DB 4; Length 2022;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFWARE: Patentin Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/O7/757,342D
FILING DATE: 10-Sep-1991
CLASSIFICATION: <Unknown>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            45;

Site_2: EcoRI; cDNA made by oligo-dT priming.
Site_2: EcoRI; cDNA made by oligo-dT priming.
Directionally cloned into EcoRI/XhoI sites using the Directionally cloned into EcoRI/XhoI sites using the following 5' adaptor: GGANCAGG(G). Size-selected >500bp for average insert size I.8kb. Library constructed by Ling Hong in the laboratory of Gerald M. Rubin (University of California, Berkeley) using ZAP-cDNA synthesis kit (Stratagene) and Superscript II RT (Life Technologies).
Note: this is a NIH_MGC Library."

/note="Organ: breast; Vector: puc18; Site_1: SmaI; Site_2: SmaI; A mini-library was made by cloning products derived from ORESTES PCR (U.S. Letters Patent application No. 196 ,716 - Ludwig Institute for Cancer Research) profiles into the pUC 18 vector. Reverse transcription of tissue mRNA and cDNA amplification were performed under low stringency conditions.
                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  EST 15-MAY-2001

Chote—"Organ: pooled pancreas and spleen; Vector:

pCMV-SPORT6; Site_1: Not1; Site_2: EcoRV (destroyed): RNA
source anonymous pool of spleen and pancreas from 28 yo
male. Library is oligo-dT primed and directionally cloned
(EcoRV site is destroyed upon cloning). Average insert
size 1:5 kb, insert size range 1-2.5 kb. Library is
normalized and enriched for full-length clones and was
constructed by C. Gruber (Invitrogen). Research Genetics
tracking code 025: Note: this is a NIH_MGC Library."
